Frontend Developer

Profile

I am a Front End developer, currently working in PHP + vanilla js solutions, in my spare time I also develop in React. By working with a great variety of developers, I have become a versatile team member that is able to work with different technologies and tool sets that better suit the lead developer. This has allowed me to work in PHP, Python, Ruby and many JS based environments.

My professional goal is to work with a development team where I'm able to contribute valuable knowledge and ideas; while learning new approaches to solve problems from my team members.

Professional Experience **Business Owner / Frontend Web developer**
Gaby's Web Services (Self-Employed), BC, Canada

Jul 2021 - Present

Self-Employed, BC, México

Feb 2011 - Jul 2021

I provide Web Development & Web Design services to small companies, development agencies and independent web developers

Duties

- Develop Front End of websites
- Develop custom plugins (Hubspot & Wordpress)
- Web design
- Create or update proprietary web systems

Accomplishments

- Hired as a contractor by local and international development agencies to aid them with their workload. Often invited to assist them in new projects as soon as the previous one ends
- Successfully conceptualized and coded a custom job board implementation in Wordpress for an american development agency
- Developed a custom starter Wordpress theme for an agency to increase the development speed for the Front End development team
- Provide training to a Front End development team of an agency to help improve their performance while developing in Hubspot

Web designer

Mint IT Media, Tijuana BC, Mexico

Jan 2012 - Jul 2015

Small development company with an enthusiastic team. It was the first company that pushed my learning process in regards to development.

Duties

- Design of websites and management systems
- Code front end of informative websites

Accomplishments

- Code multilingual website by using an array dictionary in PHP
- Implement website styling techniques that greatly improved loading times in mobile devices
- Introduced new development tools to the team to improve productivity and code preservation, such as compass and git
